AEG Power Solutions Chosen by Emmeti for UPS and Remote Monitoring

Emmeti SpA chose AEG PS to provide its Uninterruptible Power Supply (UPS) systems, as well as its MoniUPS remote monitoring system and associated service. Since 1976, Emmeti has worked in the plumbing, heating and air-conditioning field, providing increasingly complete solutions. Headquartered in Italy, it now operates in more than 60 countries around the world. Its factory critically depends on electrical power and requires a robust UPS solution that can cope with a difficult environment.

At its site in Pordenone, Italy, Emmeti uses UPS systems from AEG PS to protect plumbing, heating and air conditioning systems in its production facilities, and another system to protect the electrical power supply to its data center. MoniUPS enables AEG PS to remotely monitor all the UPS systems at Emmeti, so that it can provide proactive maintenance to fix potential problems before they occur, as well as to resolve any issues as quickly as possible. This means that the electrical availability system reliability is maximized, with the lowest downtime risk.

“AEG PS UPS systems installed in our site are the most robust devices in the market...” said Matteo Brusa, IT Manager at Emmeti. “We are also impressed by MoniUPS remote monitoring solution. It’s a very secure system, unidirectional that allows constant and real-time interaction.”
